

From column to field

Understanding microbe–oil interactions in coastal environments for real-world impact

Complex coastal conditions

Tides, salinity, temperature, nutrients

Microbe–oil interactions

Growth, attachment, biofilm formation

Hydrocarbon degradation

Metabolism, by-products, biodegradation rate

Environmental outcomes

Natural attenuation, recovery, risk reduction

Field-scale application

Informing decisions for remediation & decommissioning

Framework for field-scale response planning.

From mechanisms to models to management.
